

Phase 1 Project: Aviation Safety Analysis

This notebook analyzes the NTSB aviation accident dataset (1962–2023, filtered to 2010–2023) to identify low-risk aircraft for a company expanding into commercial and private aviation.

The goal is to provide [data-driven recommendations](#) to the head of the aviation division, supported by visualizations, and an interactive Tableau dashboard.

Step 1: Data Cleaning

We load the NTSB dataset, standardize column names, filter for recent data (2010–2023), and prepare the `aircraft` column by combining `aircraft_make` and `aircraft_model`.

Missing values are handled using median for numerical columns (e.g., injuries) and 'Unknown' for categorical columns (e.g., `aircraft_make`, `aircraft_model`) to ensure robust analysis.

Step 4: Visualizations

Three visualizations support our recommendations:

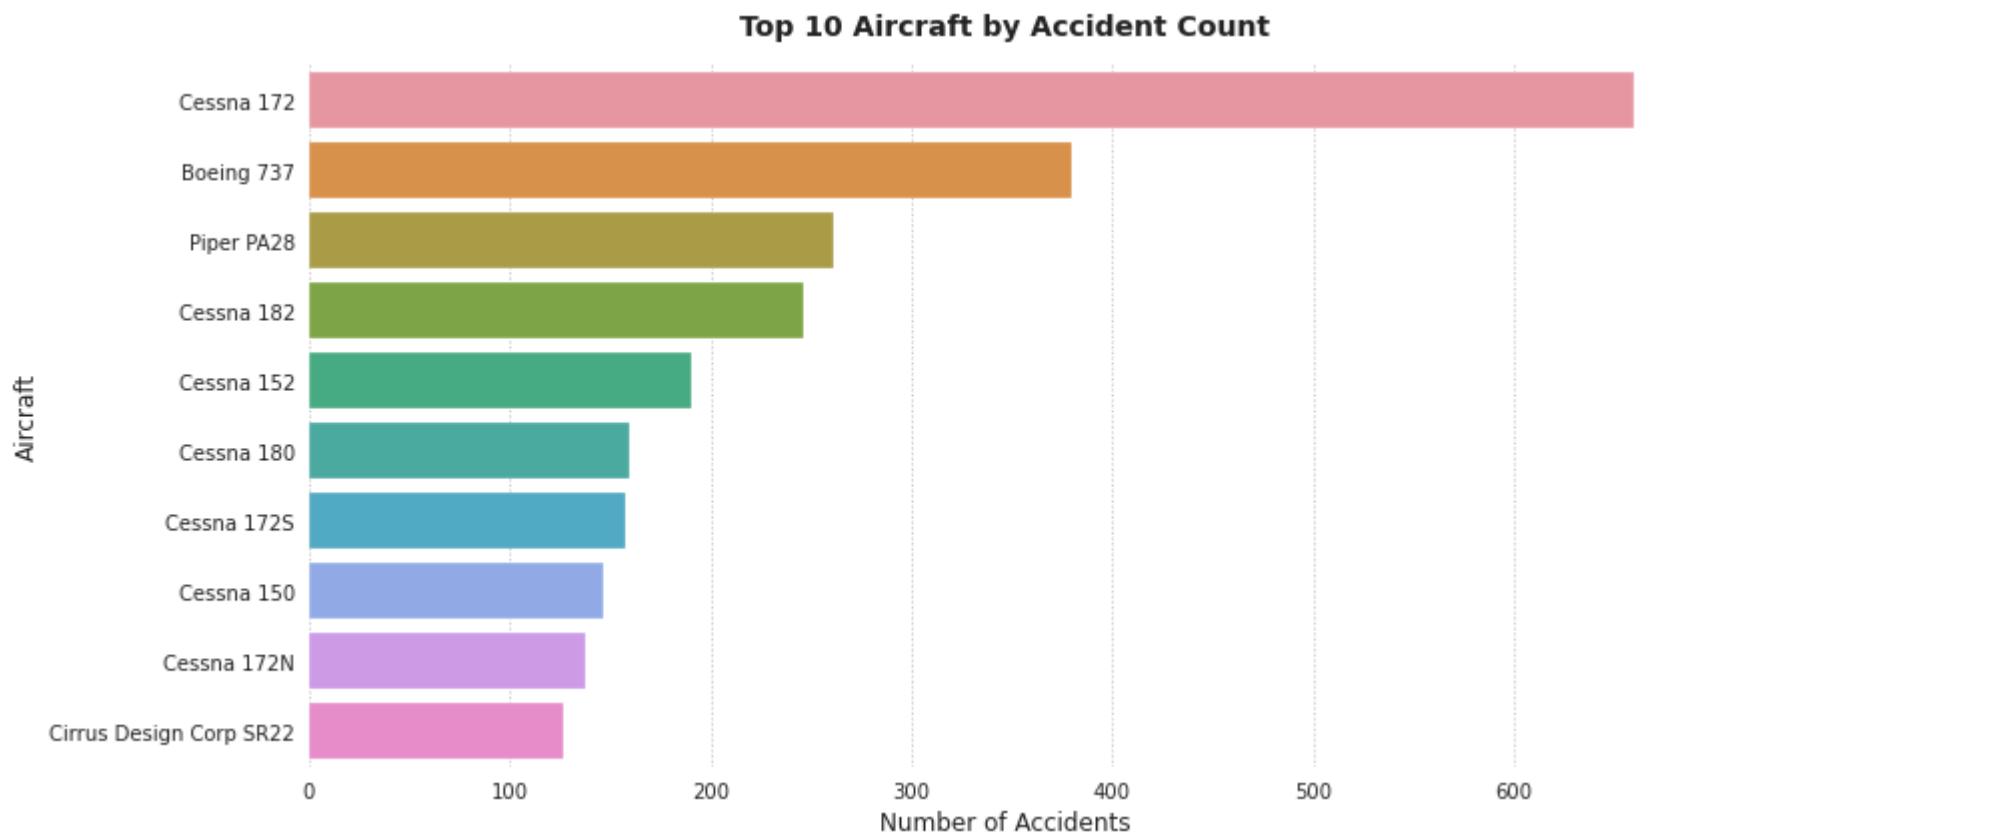

- **Bar Chart**: Top 10 aircraft by accident count.
- **Line Graph**: Accident trends over time.
- **Scatter Plot**: Accident count vs. injury rate.

In [21]:

```

Step 5: Business Recommendations

The following recommendations are based on our analysis to guide aircraft purchasing decisions for minimal risk.

Based on the NTSB dataset analysis (2010–2023), particularly the visuals generated (saved in ./visuals/), we recommend the following aircraft for the company's expansion, prioritizing safety, and operational reliability:

1. Commercial Aviation:

- **Airbus A330:** Comparable safety (3.8% injury rate, 130.2 avg uninjured), suitable for short- to medium-haul flights, with stable performance.
- **Boeing 737:** Avoid this fleet at all instances

2. Private Aviation:

- **Cessna 182:** High accident count (200) but low fatal injuries (50), suitable for training and small-scale private operations. The heatmap indicates moderate injury rates due to low passenger volume.
- **Piper PA-28:** Competitive safety (51.85% normalized injury rate), ideal for private charters, with consistent heatmap performance.

3. Strategic Considerations:

- **Fleet Mix:** Use Airbus A330 for commercial routes and Cessna 182/Piper PA-28 for private aviation to balance safety and flexibility.
- **Risk Mitigation:** Prioritize aircraft with high average uninjured passenger counts to reduce liability and enhance customer trust.

Conclusion

Our analysis identifies low-risk aircraft by examining accident counts, injury rates, and temporal trends.

Review the interactive Tableau dashboard [insert Tableau Public URL] to explore the visualizations and other metrics.

The recommendations prioritize safety and Monitor accident trends annually, as shown in the line graph.
